- (2) generating a first value reflecting the first list of nodes;

- (3) storing at the shared peripheral device the first value;
- (4) sending an access request from the processor-based node to the shared peripheral device, the request including a second value representing a second list of nodes in the multinode system;
- (5) determining whether the first and second values are identical;
- (6) if the first and second values are identical, then executing the access request to the shared peripheral device, else denying the access request;
